# Lab 1 Specifications

## Lab-specific Specifications

## **Proficiency**

□ Development board is fully assembled (e.g., all parts soldered)
□ Verilog module to control LEDs and a 7-segment display written
☐ FPGA programmed with Verilog code.
$\square$ 7-segment display can display all sixteen hexadecimal digits from $0x0$ through $0xF$
$\square$ All digits are unique (e.g., $0x6$ and $0xb$ are different shapes)
$\square$ DIP switches to control the display are arranged so that each adjacent switch controls
the next bit. (e.g., the switch for bit 0 is next to the switch for bit 1, which is next to
the switch for bit 2, etc.)
☐ LEDs display the specified logic operations properly.
Excellence
☐ Calculations provided to demonstrate that the current draw for each segment in the
seven-segment display is within recommended operating conditions.
$\square$ QuestaSim simulation with automatic testbenches for each module to demonstrate that
the design is working properly.
$\square$ All digits are equally bright, regardless of the number of segments illuminated.

## **General Specifications**

## **Schematic Specifications**

Proficiency		
<ul> <li>□ All pin names labeled</li> <li>□ All pin numbers labeled</li> <li>□ Crossing wires clearly identified as junction or unconnected</li> <li>□ Neat layout (e.g., clear organization and spacing)</li> <li>□ All parts labeled with part number</li> <li>□ All component values present</li> </ul>		
Block Diagram		
$\Box$ Block diagram present with one block per System Verilog module $\Box$ Each block includes all input and output signals		
Excellence		
General Schematic Specifications		
<ul> <li>□ Standard symbols used for all components where applicable</li> <li>□ Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side)</li> <li>□ Title block with author name, title, and date</li> </ul>		
HDL & Code Specifications		
Proficiency		
<ul> <li>□ Descriptive filename that matches module name (e.g., lab2_jb.sv)</li> <li>□ One module per file</li> <li>□ Descriptive variable names</li> <li>□ Neat formatting (e.g., standard indentation, consistent formatting for variable names (kebab-case/snake_case/camelCase/PascalCase))</li> <li>□ Descriptive and clear function/module names</li> <li>□ Comments to indicate the purpose of each function/module</li> </ul>		

Excellence		
<ul> <li>□ Name, email, and date at the top of every file</li> <li>□ Comment at the top of each source code file to describe what is in it</li> <li>□ Comment at the top of each source code file to describe what is in it</li> </ul>		
☐ Clear and organized hierarchy (e.g., delineation between top level modules and submodules)		
☐ Testbenches written for each individual module to demonstrate proper operation ☐ Testbench output for each module included in the report		
Writeup/Summary		
Proficiency and Excellence		

Statement of whether the design meets all the requirements. If not, list the shortcomings.
Number of hours spent working on the lab are included.
Writeup contains minimal spelling or grammar issues and any errors do not significantly
detract from clarity of the writeup.
AI prototype attempted and some reflection is recorded.
(Optional) List comments or suggestions on what was particularly good about the
assignment or what you think needs to change in future versions.

#### Comments

Add specific notes here about the assignment.
