Lab 5 Specifications

Lab-specific Specifications

Proficiency

\square Design measures and displays speed of motor in units of m/s with an update rate of at
least 1 Hz.
☐ Measured speed matches true motor speed and direction (calculations should be provided in the report to verify this).
☐ Code uses interrupts (rather than polling or timers) to detect encoder pulses.
☐ Interrupt code does not miss any encoder pulses at normal speed.
Excellence
\square Design uses all edges of encoder pulses to achieve highest resolution measurement.
☐ MCU does not miss any pulses at high speed and outputs a non-zero velocity at low speeds.
\square Report compares the performance of interrupt based code to manual polling at high speeds.
☐ Report includes flowchart illustrating main steps of the program and function calls.

General Specifications

Proficiency

General Schematic Specifications
 □ All pin names labeled □ All pin numbers labeled □ Crossing wires clearly identified as junction or unconnected □ Neat layout (e.g., clear organization and spacing) □ All parts labeled with part number □ All component values present
Block Diagram
\Box Block diagram present with one block per System Verilog module \Box Each block includes all input and output signals
HDL & Code Specifications
General Formatting
 □ Descriptive filename (e.g., lab2_jb.sv) □ Descriptive variable names □ Neat formatting (e.g., standard indentation, consistent formatting for variable names (kebab-case/snake_case/camelCase/PascalCase)) □ Descriptive and clear function/module names
Comments
$\hfill\Box$ Comments to indicate the purpose of each function/module
Lab Writeup/Summary
 □ Brief (e.g., 3-5 sentence) description of the main goals of the assignment and what was done. □ Explanation of design approach. How did you go about designing and implementing the design? □ Explanation of testing approach. How did you verify your design was behaving as expected? □ Statement of whether the design meets all the requirements. If not, list the shortcomings □ Number of hours spent working on the lab are included. □ Writeup contains minimal spelling or grammar issues and any errors do not significantly detract from clarity of the writeup. □ (Optional) List comments or suggestions on what was particularly good about the as
□ (Optional) List comments or suggestions on what was particularly good about the as signment or what you think needs to change in future versions.

Excellence

 Standard symbols used for all components where applicable Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side) Title block with author name, title, and date
HDL & Code Specifications
General Formatting
 □ Name, email, and date at the top of every file □ Comment at the top of each source code file to describe what is in it □ Clear and organized hierarchy (e.g., delineation between top level modules and submodules)
Testbenches
\Box Test benches written for each individual module to demonstrate proper operation \Box Test bench output included in the report
Lab Writeup/Summary
\Box Writeup is free of spelling and grammar issues
