Lab 6 Specifications

Lab-specific Specifications

Proficiency

☐ Design uses CMSIS library device templates.		
□ SPI library written		
\Box SPI library can communicate with the digital temperature sensor to read the current		
temperature		
\square System properly handles temperatures between -10 $^{\circ}\mathrm{C}$ and 30 $^{\circ}\mathrm{C}.$		
☐ Webpage displays current temperature with units		
☐ Webpage updates temperature when refreshed		
☐ Webpage properly displays the LED state		
☐ Webpage can control the LED state		
Excellence		
□ Report includes sample SPI transaction from logic analyzer		
☐ System reads temperature values at either user-configured resolution (e.g., user can choose		
from $8/9/10/11/12$ -bit resolution on webpage).		

General Specifications

Schematic Specifications

Proficiency		
 □ All pin names labeled □ All pin numbers labeled □ Crossing wires clearly identified as junction or unconnected □ Neat layout (e.g., clear organization and spacing) □ All parts labeled with part number □ All component values present 		
Excellence		
 □ Standard symbols used for all components where applicable □ Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side) □ Title block with author name, title, and date 		
Block Diagram		
Proficiency and Excellence		
\Box Block diagram present with one block per System Verilog module \Box Each block includes all input and output signals		
HDL & Code Specifications		
Proficiency		
 □ Descriptive filename that matches module name (e.g., lab2_jb.sv) □ One module per file □ Descriptive variable names □ Neat formatting (e.g., standard indentation, consistent formatting for variable names (kebab-case/snake_case/camelCase/PascalCase)) □ Descriptive and clear function/module names □ Comments to indicate the purpose of each function/module 		

Excellence		
 □ Name, email, and date at the top of every file □ Comment at the top of each source code file to describe what is in it □ Comment at the top of each source code file to describe what is in it 		
☐ Clear and organized hierarchy (e.g., delineation between top level modules and submodules)		
☐ Testbenches written for each individual module to demonstrate proper operation ☐ Testbench output for each module included in the report		
Writeup/Summary		
Proficiency and Excellence		

Statement of whether the design meets all the requirements. If not, list the shortcomings.
Number of hours spent working on the lab are included.
Writeup contains minimal spelling or grammar issues and any errors do not significantly
detract from clarity of the writeup.
AI prototype attempted and some reflection is recorded.
(Optional) List comments or suggestions on what was particularly good about the
assignment or what you think needs to change in future versions.

Comments

Add specific notes here about the assignment.
