Lab 2 Specifications

Lab-specific Specifications

	ofic	•	
$\mathbf{p}_{\mathbf{r}}$	∩tı/	ומוי	201
	UII	-101	16.

	HDL design includes only a single seven-segment decoder module. Sum of the numbers on the two displays is correctly displayed for all inputs Seven segment displays are same brightness regardless of how many segments are lit Resistors are in series with FPGA pins so that they correctly limit current
Excell	ence
	No noticeable bleeding of the digits between displays
	No flickering on the individual digits
	Current draw/sink on all FPGA pins are below the currents specified in the recommended operating conditions. Claims are backed up by calculations and reference to the
i	appropriate items on the datasheet.
	Digits on the seven-segment display are upright to the viewer.

General Specifications

Schematic Specifications

Proficiency
 □ All pin names labeled □ All pin numbers labeled □ Crossing wires clearly identified as junction or unconnected □ Neat layout (e.g., clear organization and spacing) □ All parts labeled with part number □ All component values present
Excellence
 □ Standard symbols used for all components where applicable □ Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side) □ Title block with author name, title, and date
Block Diagram (Required for labs 1, 2, 3 and 7)
Proficiency and Excellence
\Box Block diagram present with one block per System Verilog module \Box Each block includes all input and output signals
HDL & Code Specifications
Proficiency
 □ Descriptive filename that matches module name (e.g., lab2_jb.sv) □ One module per file □ Descriptive variable names □ Neat formatting (e.g., standard indentation, consistent formatting for variable names (kebab-case/snake_case/camelCase/PascalCase)) □ Descriptive and clear function/module names □ Comments to indicate the purpose of each function/module

Excellence
 □ Name, email, and date at the top of every file □ Comment at the top of each source code file to describe what is in it □ Comment at the top of each source code file to describe what is in it
☐ Clear and organized hierarchy (e.g., delineation between top level modules and submodules)
☐ Testbenches written for each individual module to demonstrate proper operation ☐ Testbench output for each module included in the report
Writeup/Summary
Proficiency and Excellence

Statement of whether the design meets all the requirements. If not, list the shortcomings.
Number of hours spent working on the lab are included.
Writeup contains minimal spelling or grammar issues and any errors do not significantly
detract from clarity of the writeup.
AI prototype attempted and some reflection is recorded.
(Optional) List comments or suggestions on what was particularly good about the
assignment or what you think needs to change in future versions.

Comments

Add specific notes here about the assignment.
